

DECO 1000V 360MM INSULATING RUBBER GLOVES

The principle aim of DECO Industrial Gloves is to manufacture electrical insulating gloves that adhere to and surpass all standards required (AS2225, IEC60903, ASTM).

Deco Industrial Gloves are manufactured from Natural Rubber Latex formulated to ensure high dielectric properties.

Our manufacturing procedures are audited by SAI Global Australia* AS2225 License NO: 901 IEC 60903 (International Standard)

The lifespan of Deco Industrial rubber insulating gloves is the ability of the glove to continually pass its required proof test as per the standard that the glove is manufactured to.

Therefore if a glove is to pass its required electrical test it is then deemed suitable for continued use until its next test due date.

Gloves are due to be tested the first 12 months after stated production date and continually every 6 months after to ensure they meet the required standard.

Individual glove tests available

Sizes:

sizes 7 & 12
special request

AE1000360-SIZE

Colour: Orange

Length: 360MM

Proof tested to
10,000V

Each glove is marked with the following

1. Name of manufacturer
2. Year and month of manufacture
3. Working potential
4. Size
5. Batch number
6. Standards Mark and License No.901
