ToughSystem 2.0 Internal Tray - Shallow

Maximise storage space. The ToughSystem Shallow Tool Tray is designed to add space within ToughSystem 2.0 toolboxes and provide customisable organisation to fit jobsite needs. Customise your trays by inserting plywood dividers to best suit your needs. Tray-positioning latches allow you to hang trays at the top of your toolbox so they don't interfere with larger tools stored at the bottom. Optimise organisation by stacking trays inside to create customised storage modules within ToughSystem 2.0 toolboxes. Easily connect, remove, and carry multiple ToughSystem trays with double-function, side-carry handles. Combine the shallow and deep trays to customise your storage modules within all ToughSystem 2.0 products.

Selling Propositions

- STACKING ABILITY - Trays can be stacked together inside the boxes or transported outside of a TOUGHSYSTEM 2.0 boxes together via the handle latches
- DUAL FUNCTION SIDE HANDLES - Allows the end user to remove the trays from a box easily and also acts as a latch connecting trays to each other
- SPACE EFFICIENT ORGANISATION - Contoured to the shape of the TOUGHSYSTEM 2.0 boxes the internal trays allows end users to use all internal space in an organised and time efficient way
- Can be used as part of the TOUGHSYSTEM 2.0 platform or even stacked separately as an organiser system
- COMPATIBLE WITH ALL TOUGHSYSTEM 2.0 MODULES
