TECHNICAL INFORMATION

Compatible pressing tools for the Geberit FlowFit, Geberit Mepla, Geberit Mapress and Geberit Volex pressing systems

1 About this document

This Technical Information provides details of the pressing tools which, upon the recommendation of Geberit, can be used to press the Geberit FlowFit, Geberit Mepla, Geberit Mapress and Geberit Volex pressing systems, provided the original Geberit pressing attachments are also used.

Geberit provides no warranty regarding the defect-free functioning of pressing tools from third-party manufacturers in conjunction with this declaration of compatibility. Such warranty continues to be the responsibility of the respective manufacturer.

This Technical Information is updated annually in order to take into account ongoing changes and new insights. The validity of the document should be verified before use.

2 Compatible pressing tools

The following pressing tool types are structurally identical or compatible with the Geberit pressing tools, i.e. the listed pressing tool types can, upon the recommendation of Geberit be used to process the Geberit FlowFit, Geberit Mepla, Geberit Mapress and Geberit Volex pressing systems, provided the original Geberit pressing attachments (pressing jaws, pressing collars, adapter jaws) are also used.

Other pressing tools have not been tested by Geberit in terms of their suitability for the Geberit pressing attachments. Using pressing tools with excessive pressing force can significantly reduce the service life of the Geberit pressing attachments.

Table 1: Compatibility of the pressing tools

Compat-ibility	Contractual partner	Type/designation	Remarks	Manufactured until
[1]	Geberit	ACO 103plus	–	–
