

WIRELESS SWITCHES

RBC300 SERIES

The RBC300 series wireless switches from Revolution Building Controls require no batteries or ongoing maintenance. They generate their own electricity when you press the switch. This minute amount of electricity powers the internal transmitter to broadcast a unique code. Any wireless receiving controllers within range and paired with the switch will control their loads.

These wireless switches can be located almost anywhere and on most surfaces. Installation was never quicker or easier. Up to 10 switches can be paired with one controller for multi-way switching and dimming. You can also pair one switch with several controllers to switch or dim multiple loads.

Specification :

Switch Supply - Self generating
RF Frequency - 433MHz
Pairing Method - Push button or remote App
Range - Approx 30M indoors - through walls and floors
Approx 100M outdoors - line of sight
Endurance - 200,000 + operations
