

MeterMade is designed to trim back the insulation of existing meter tails, or strip new 16mm² and 25mm² cables before fitting TELLTAIL the all-in-one safety collar and cable marker.

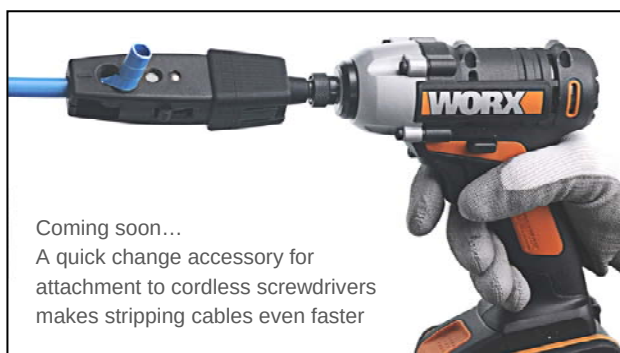

These tools enable experienced or inexperienced workers to produce precisely stripped cables quickly and safely first time, every time.

The concealed stripping blades eliminate the risk of accidental injury and provide a safe and sensible alternative to using knives or cutters.

Much faster than using conventional tools and by simply sliding a switch, the strip dimension is rapidly changed to suit service cut-outs, isolators, connector blocks or TELLTAILS.

Features and Benefits

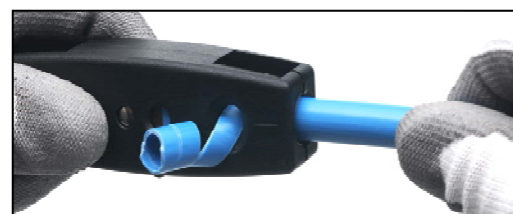

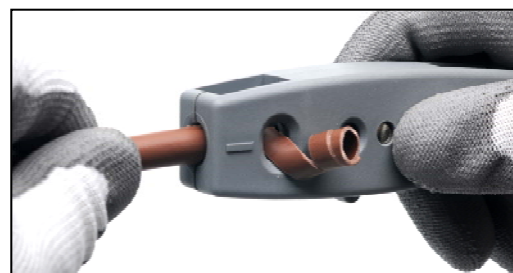

- Much faster than conventional tools
- High quality precise strips first time, every time
- Easy to use in poorly lit and confined spaces
- Enables experienced or inexperienced workers to quickly and safely replicate the ideal strip
- Simply slide a switch to change strip dimensions
- Hidden blades eliminate the risk of accidental injury and provide a sensible alternative to knives
