x1

Product Description

This easy-to-use product pack keeps electricians compliant with BS 5839-6 in respect to the correct labelling of Grade D fire alarm system installations. The Home Occupiers Guide included within this pack provides a simple and efficient way to satisfy the requirements of BS 5839-6 in relation to the documented information for the system which must be issued to the user by the installer.

Use this product pack in conjunction with our certificates, checklists, technical documentation and management systems that are part of our CEF Technical & Business Documentation Pack, to be fully compliant with BS 5839-6 and the BAFE DS301 competency scheme.

FIRE ALARM NOT FOR RENTED PROPERTY LABEL

Product Features

- British Standard compliant
- Vinyl based adhesive label for durability
- Clear font with contrast background for improved legibility

Non-Domestic Fire Alarms	Grade C Fire Alarms	Grade D Fire Alarms	Emergency Lighting	Voice Alarms	Emergency Voice Communications	Evacuation Alert Systems
		✓				

Product Description

The application of this label is not a British Standard requirement, this label provides a practical visual indicator to the home occupier that the D2 grade detector type they have installed is not suitable should the dwelling have changed from an owner-occupied to a rented property and a D1 grade detector is required.

This label is ideally located on the cover of the electrical consumer unit and refers out to the Home Occupiers Guide which is also part of this Grade D Fire Alarm System Installers Pack.

BS 5839-6 Grade D Home Occupiers Guide

Product Features

- British Standard compliant
- High quality, durable A5 guide
- A guide designed by fire alarm professionals to be used by fire alarm professionals and their clients

Product Description

This guide is designed to provide the occupier with sufficient information regarding the Grade D mains-powered fire detection and fire alarm system installed within their home.

It is essential that the occupier of the premises, which might mean all occupiers in the case of a house of multiple occupation (HMO), understand the operation of the system installed within their dwelling, the action to be taken in the event of a fire alarm, how to avoid false alarms, procedures for testing the system and the need for routine maintenance.

It is of utmost importance that a warning is provided to the householder that informs them that children might not be woken by fire alarm tones and that children are never left alone in a dwelling, families rehearse a fire escape plan and that it is a priority that any sleeping children are woken immediately and taken to a safe place outside the property. The householder should also understand that the fire and rescue service should always be called without delay no matter how small the fire.

It is normally the responsibility of the installer of the smoke and heat alarms to provide all of this information and more, but in rented properties where there is a change in occupation then it is likely to be the responsibility of the landlord.

Our Home Occupier Guide provides a cost-effective and practical way to satisfy the issue of user information clause within BS5839-6 by the issue of a single booklet.

The issue of this logbook to the user is a simple and slick way to comply with the requirements of BS 5839-6 covering the following areas:

- Occupier & property details
- Operation of the system
- Schedule of agreed variations
- Installed equipment / expendable component schedule
- Routine testing and maintenance
- Monthly test records
- False alarms
- Action in the event of a fire alarm signal
- Checks following reoccupation after a vacation
- Changes to the building
- System design, installation, and commissioning information
- Verification of existing system
- Documentation & certification
