For ventilation systems to be truly efficient it is important for them to operate only when needed. Our range of Sentinel demand ventilation systems along with our controls and sensors help respond to the exact ventilation requirements of a room at any one time. Providing airflow only when it is required and at the level that it is required ensures that only the energy that is needed is used; no more no less.

Approved Document L now recognises the value that controls can offer and you will find Vent-Axia offer a range of solutions to ensure that you can maximise the benefit of automation where ever you chose to use it.

The solution to the growing issues of poor indoor air quality, caused by increasing air tightness and insulation, is controlled mechanical ventilation using intermittent extract, heat recovery or central extract, wholehouse systems. Controls improve the efficiency and effectiveness of the ventilation systems through close control of the environment in which they are installed.

Vent-Axia has the most comprehensive range of humidity sensors available on the UK market covering conventional AC, SELV and Lo-Carbon fans.

Air Quality Sensor

Automatically reacts to the depletion of air quality, sensing tobacco smoke, smells and toilet odours to regulate mechanically ventilated areas such as cinemas, pubs, clubs, restaurants, kitchens, toilets and conference rooms. This is not a CO₂ sensor.

The sensor switches the fan On when the air quality declines below an adjustable preset level. This is registered by the ceramic sensing head which is self-cleaning, a process which occurs every time the unit is triggered. When the atmosphere has returned to normal, the fan will continue to run for a pre-set period (adjustable between 1-25 minutes) and then switch Off.

The air quality sensor should not be used for the detection of combustible gases and is not designed for use as a smoke detector in an alarm system.

For use with various Vent-Axia fans within maximum rating below.

The AQS is also able to switch between trickle and boost speed on the appropriate ventilation units.
